Computer Science student at President University (GPA: 3.94/4.00) with a strong passion for Artificial Intelligence and mobile/web development. Experienced in building real-world applications that integrate AI with modern frameworks like React Native, Langchain, and Pytorch. Known for being proactive, detail-oriented, and dedicated to continuous learning.

Skills

- **Programming languages:** Python, JavaScript, TypeScript
- **Framework & Libraries:** React, React Native, PyTorch, Langchain, LangGraph
- **Databases & Tools:** MongoDB, MySQL, Git

Work Experiences

Mobile Application Developer & AI Engineer – Intern

President University | Bekasi, Aug 2025 – Present

- Maintained and enhanced a React-based chatbot used by students for academic queries and services.
- Built a React Native app allowing students to view academic profiles and access AI-powered support.
- Developed an AI agent using LangGraph to run design thinking simulations for student learning.

Programming Concept Lab Assistant – Part-Time

President University | Bekasi, Sep 2025 – Present

- Guided first-year students in understanding loops, conditionals, pointers, and other programming fundamentals.
- Graded assignments and exams, providing constructive feedback to support learning outcomes.
- Helped students troubleshoot code and created extra exercises to reinforce core concepts.

Projects

PUIS Mobile – App Developer, AI Orchestration

- Developed a mobile app for students to access GPA, payment history, schedules, and academic data in one place.
- Integrated the app with university AI to deliver personalized insights and adaptive academic support.
- Built an AI-driven tool to launch design thinking simulations for interactive learning experiences.

Defect Detection & Root Cause Analysis – AI Trainer

- Created and annotated a custom dataset of toy car defects using polygon segmentation techniques.
- Trained object detection and segmentation models (YOLO, Mask R-CNN) for accurate defect identification.
- Built ML models to analyze defect patterns and predict root causes based on visual inputs

Nutrical – Prompt Engineer, App Developer

- Designed prompts for Gemini LLM to extract nutritional info from food images submitted by users.
 - Structured the model outputs into usable formats for nutrient tracking and analysis.
 - Developed a system to log, display, and visualize users' daily nutrient intake predictions.
-

Education

President University – Bekasi, Indonesia

Bachelor of Computer Science, 2023 – Present

GPA: 3.94 / 4.00

Scholarship: Jababeka Partial Scholarship (75%, 2nd Rank)

- 2nd Place – App Category, President University Economic Survival Exhibition
- Member, Learning Division – PRESCOME (President University Computer and Technology Enthusiast)
